## QUESTION

### Matrices 2.20

For the matrix  $\mathbf{A} = \begin{pmatrix} 1 & 5 \\ 6 & 7 \end{pmatrix}$ , verify that

- (i)  $(\mathbf{A} + \mathbf{A}^\top)$  is a symmetric matrix
- (ii)  $(\mathbf{A} - \mathbf{A}^\top)$  is a skew symmetric matrix

## SOLUTION

Given,

$$\mathbf{A} = \begin{pmatrix} 1 & 5 \\ 6 & 7 \end{pmatrix} \quad (0.0.1)$$

Transposing the matrix,

$$\mathbf{A}^\top = \begin{pmatrix} 1 & 6 \\ 5 & 7 \end{pmatrix} \quad (0.0.2)$$

(i)

Using (0.0.1) and (0.0.2) we get,

$$(\mathbf{A} + \mathbf{A}^\top) = \begin{pmatrix} 1 & 5 \\ 6 & 7 \end{pmatrix} + \begin{pmatrix} 1 & 6 \\ 5 & 7 \end{pmatrix} \quad (0.0.3)$$

$$(\mathbf{A} + \mathbf{A}^\top) = \begin{pmatrix} 2 & 11 \\ 11 & 14 \end{pmatrix} \quad (0.0.4)$$

Using (0.0.4) we get,

$$(\mathbf{A} + \mathbf{A}^\top)^\top = \begin{pmatrix} 2 & 11 \\ 11 & 14 \end{pmatrix} \quad (0.0.5)$$

Using (0.0.4) and (0.0.5) we get,

$$(\mathbf{A} + \mathbf{A}^\top)^\top = (\mathbf{A} + \mathbf{A}^\top) \quad (0.0.6)$$

$\therefore (\mathbf{A} + \mathbf{A}^\top)$  is symmetric matrix.

(ii)

Using (0.0.1) and (0.0.2) we get,

$$(\mathbf{A} - \mathbf{A}^\top) = \begin{pmatrix} 1 & 5 \\ 6 & 7 \end{pmatrix} - \begin{pmatrix} 1 & 6 \\ 5 & 7 \end{pmatrix} \quad (0.0.7)$$

$$(\mathbf{A} - \mathbf{A}^\top) = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \quad (0.0.8)$$

Using (0.0.8) we get,

$$(\mathbf{A} - \mathbf{A}^\top)^\top = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \quad (0.0.9)$$

Using (0.0.8) and (0.0.9) we get,

$$(\mathbf{A} - \mathbf{A}^\top)^\top = -(\mathbf{A} - \mathbf{A}^\top) \quad (0.0.10)$$

$\therefore (\mathbf{A} - \mathbf{A}^\top)$  is skew symmetric matrix.
